

DOCUMENTATION PLACEHOLDER

If L^AT_EX support is not available for Doxygen when fortran-lua53 is built, this placeholder file will be substituted for `fortran-lua53_Users_Guide.pdf` to prevent CPack from failing on a missing file. If you are reading this, full developer documentation was not available when this installation package was created. Ensure Doxygen and a compatible T_EX distribution are available and rebuild from source to generate `fortran-lua53_Users_Guide.pdf`.
